

Mattia Asti

Software Engineer

I'm a software engineer with over 14 years of experience, currently based in London, UK. I work best with TypeScript across the full stack while specializing in the frontend, where I've been using React for years. These days, a lot of my work is AI-assisted, and I've used Claude Code heavily over the past year. I'm the type of engineer who thrives at the intersection of product and code; I genuinely enjoy talking to users, understanding their problems, and shaping solutions that address real needs. I'm a big fan of home automation and love finding new ways to use my collection of Raspberry Pis.

Staff Software Engineer - Apple May 2022 – Present

I'm part of Apple Services Engineering where I work on internal tooling allowing us to scale our localization across 175 countries and over 50 languages.

- Replaced an opaque AI black box with an agentic editorial workflow users can see and steer at every step.
- Built a remote caching service in Rust used by 20+ teams. Saved 6k hours/year in compute and engineering.
- Cut analytics feature delivery from 3 months to 2 weeks by applying AI across the whole workflow: design and process, not just code.
- Cut CI from 30 minutes to ~3 across a 9-app monorepo with state-of-the-art tooling.
- Organized high-profile community events with engineering directors, including an EMEA frontend conference and a talk with the creator of Bun.
- Act as a technical multiplier across the org: my internal React guides are the go-to standard and engineers of all seniority levels rely on my reviews and advice.
- Authored company-wide shared libraries; my internal Playwright Docker image has 100k+ downloads.
- Pioneered identity attestation and mTLS-based internal auth; my guide and example repo became the go-to reference for frontend engineers.

Technical Lead - tru.ID (IDlayr) Jan 2021 – May 2022

IDlayr was a startup transforming authentication with SIM security. I was the technical lead for the Developer Portal which included: public docs, code samples and a console dashboard. I've done extensive work on the OIDC authentication layer.

Senior Software Engineer - 11:FS Oct 2019 – Sep 2020

11:FS was a leading fintech consultancy. I built their authentication layer with Auth0, including the architecture of a mobile passwordless login. I was one of the engineers responsible for running demos to our existing and potential clients, including top-tier banks.

Senior Software Engineer - TES Global Oct 2017 – Aug 2019

TES was one of the largest professional networks in the world with 8M+ teachers. I worked on a significant refactoring of a payment gateway used in the resources marketplace, the highest-traffic part of the website with ~500k daily views.

Co-founder - Hextech Jan 2017 – Jan 2021

Started as a side project with friends working in our spare time during evenings. Built two mobile apps and attempted a fintech-education startup for kids. Learned a lot from the failures.

Lead Developer - TechHub Oct 2013 – Oct 2017

TechHub was the leading co-working space in London. I've integrated our backend systems with different payment gateways and dealt with localization after launching 5 international locations. I also built the internal CRM, website, and a mobile app for the members.
